

## INDIVIDUAL REFLECTION: SANTHOSH NARAYAN

### Sashko Stubailo

Sashko came into the project with what seemed like a lot of front-end and design experience. He did a great job designing the logo from the start and implementing a lot of CSS involved in the design. Sashko also did a great job communicating and getting us to use github tools to stay in touch while he was often travelling.

### David Sessoms

David seemed to have a similar background to myself at the start of the project and did a great job using the rails tools he knew and learning new tools and gems to really contribute to the team.

### Victor Pontis

Victor came into the project really passionate about creating a great project and was truly good at keeping us focussed on the end user and determining what design choices would keep us on track to do the best for our end users. Victor also did a great job at encouraging the use of github tools.
